- Language: Java, HTML, CSS.
- Framework: Spring Boot, Spring Framework.
- Testing: JUnit, Mockito, Testcontainer.
- Databases: PostgreSQL, MySQL, Hibernate.
- Git - GitHub - GitLab
- Linux, Docker, Docker Swarm.

## CAREER OBJECTIVE

Hello, my name is Tuan. I come from Ha Tinh. I'm on the learning journey to becoming a Java Web Developer and beyond to be a Java Expert. Loving the use of Linux and Open Sources and wish possible to contribute to open source projects someday.

I am a self-motivated, hardworking developer and so excited to begin my career path by looking for an internship/fresher at a Company composed of driven professionals. I am looking to explore my career options in the IT sector as a Java Backend Developer.

## WORK EXPERIENCE

### ECOWALL | MY FIRST WEBSITE

In 2015, while working as a wallcovering installer (thợ dán tường). I built my first website with Joomla and named it ecowall.vn, I used it to sell wallcovering. I bought a template, hosting, domain name and started learning how to build a complete website. The website is running smoothly, and some customers have called me to make an order. But then I don't have money to buy supplies. Although it has been discontinued, I have found some pictures of it to show you, if you are interested. **Images**

### HOMEVALUES | ONE MORE TIME

While working as a shipper in a warehouse, I built another website using Magento intending to be able to sell products by myself without having to work as a shipper. I also bought a template mostly related to what I needed and installed it according to the instructions. This time I built it on localhost and realized it was too complicated to do alone. Although it can not launch, I learned a lot from it.

## PERSONAL PROJECT

**See more projects**

### GG-ADMIN | ECOMMERCE WEBSITE ADMIN   source code

Web admin used to operate and management e-commerce sites: product, orders, marketing, user management.

Back-end:
- Languages: Java.
